ZERO-DAY
VULNERABILITY SUBSCRIPTION

EXODUS
INTELLIGENCE

PROTECT YOUR NETWORKS FROM UNKNOWN THREATS

Exodus Intelligence detects the undetectable. Exodus discovers, analyzes and proves Zero-Day vulnerabilities in our secure lab and provides our research to credentialed customers through our secure portal. Exodus' Zero-Day Subscription provides customers with critically exploitable vulnerability reports, unknown to the public, affecting widely used and relied upon software, hardware, and embedded devices. You will gain access to a proprietary library of over 50 zero-day vulnerability reports in addition to proof of concepts and highly enriched vulnerability intelligence packages. These Zero-Day Vulnerability Intelligence packages, unavailable anywhere else, enable you to reduce your mean time to detect and mitigate critically exploitable vulnerabilities prior to the vendor patch. Exodus enables you to focus resources on establishing defenses against the most serious threats to your enterprise for less than the cost of a single cybersecurity engineer.

REVERSE ENGINEERING
Our elite engineers use advanced proprietary techniques to dissect and examine every line of code to discover zero-day vulnerabilities. Our customers benefit greatly from having access to hundreds of zero-day vulnerability reports not available anywhere else.

ACTIONABLE MITIGATION GUIDANCE
Exodus engineers examine the behavior of exploitable vulnerabilities in order to demonstrate the impact of the threat and help customers harden defenses with actionable mitigation guidance.

VENDOR DISCLOSURE
Exodus research is provided to the appropriate vendor for remediation within a 6-month timeline. This allows our customers to properly build and test defenses prior to the research becoming public.

THE VAULT
Customers access the entire repository of our vulnerability research held in our Vault. The enriched vulnerability intelligence empowers customers with high efficacy, decision ready information to implement meaningful risk management actions.

WHAT OUR CUSTOMERS RECEIVE

ENHANCE NETWORK DEFENSE WITH EXODUS' ENRICHED VULNERABILITY INTELLIGENCE FOR HIGH-PROFILE VENDORS

COMMERCIAL

- Microsoft
- Adobe
- EMC
- Novell
- IBM, and others

INDUSTRIAL CONTROL SYSTEMS

- Siemens
- General Electric
- Rockwell Automation, and others

Exodus offers highly enriched, valuable intelligence that enables you to test and optimize your defenses with precision. Every vulnerability is analyzed and well documented. Our Vulnerability Research Packages include:

VULNERABILITY INTELLIGENCE REPORT
Understand all aspects of the vulnerability
NETWORK PACKET CAPTURE
See both malicious and benign traffic

XML | RESTful API | STIX/TAXII
Integrate defenses into third-party SIEM or other defensive products

PROOF OF CONCEPT
Test your defenses with a working proof-of-concept

VULNERABILITY INTELLIGENCE REPORT
The report is 15 to 30 pages covering all aspects of the vulnerability, including:

- Affected products, versions, supported architectures, and hashes of binary files

- Target market share, common usage, and typical deployment configurations

- Technical information on the vulnerable components and enumeration of attack vectors

- Disassembly and/or source code

- Walkthroughs showing the flaws in the code

- Detailed information on attack vectors and corresponding malicious network traffic

- Guidance on how to detect an attack in progress, as well as artifacts left behind in the case of a successful compromise

- An explanation of the complete exploitation process, including bypassing mitigations

- Insight into the requirements, reliability, difficulty, and likelihood of an attacker successfully exploiting the issue

- Guidance on reducing or eliminating susceptibility to the flaw in place of an official patch from the affected vendor
